

Illinois Easy-Miler Milage Guide

The Transportation Division of the Illinois Commerce Commission has produced **ILLINOIS EASY MILER**, a mileage system designed for Illinois motor carrier use.

ILLINOIS EASY MILER provides a calculated mileage between more than 3400 Illinois points. Calculations are based on straight line distances, increased to account for circuitry, between over 300 sectors, with each point assigned to a specified sector. This methodology offers simplicity and consistency while providing calculated distances that are in most instances very close to actual miles.

The computer version also permits carriers to determine distances for multiple stop shipments, listing the mileages between each stop-off segment, as well as the total mileage. Carriers that transport feed, seed and fertilizer products, or conduct peddle run operations will find this feature especially useful.

You can test run **ILLINOIS EASY MILER** by visiting the Springfield office. The **EASY MILER** package, consisting of both printed and computer versions, is available for \$25.00 to cover copying and distribution costs. You may also order **ILLINOIS EASY MILER** at our Springfield office, or by calling [217] 782-4654, or by sending your written request, along with \$25.00 payment, to:
